

MASTERS OF DESTRUCTION

DiskMantler™
HDS-35SL

Patent Pending

Revolutionizing ITAD

The patent-pending DiskMantler™ uses a process of shock, harmonics, and vibration to disassemble hard drives into key components—case, cover, PC board, platters, voice coil, and rare-earth magnets.

Enhanced Recycling Efficiency

Precise separation allows magnets, PC boards, metals, plastics, and electronic parts to be directed to the appropriate recycling stream.

Automated Efficiency

In just 8 to 90 seconds per drive, this hands-free, automated process disassembles hard drives according to the operator's desired degree of separation, preparing the components for responsible recycling.

Circular Economy

The DiskMantler™ simplifies the extraction of rare-earth elements and their reintegration into the supply chain, significantly reducing e-waste and minimizing negative environmental impact compared to traditional shredding, crushing, or melting methods.

Watch our video to see the DiskMantler™ in action.

MASTERS OF DESTRUCTION

DiskMantler™
HDS-35SL

5 Hard Drives
5 Minutes

Features & Benefits

Seamless Operations

Insert the HDD into the media slot, and the DiskMantler™ automatically disassembles it in the chamber, delivering the dismantled components through the exit slot.

Easy Maintenance

Quick-disconnect latches and ergonomic side handles provide easy access to the removable debris tray and internal mechanisms, simplifying upkeep.

Pair with Garner's DeMAG™

Start your hard drive decommissioning process with Garner's DeMAG™—a patent-pending super degausser with a gauss strength of 4 Tesla. The DeMAG™ eliminates all magnetic fields on HDD platters, ensuring data is forensically unrecoverable. It also demagnetizes the rare-earth magnets, making them easier to manage and sort after disassembly. Together, the DiskMantler™ and DeMAG™ offer the **most** comprehensive solution for verifiable data destruction, hard drive disposal, and recycling.

Max Recycling Value

Intact, high-value components like rare-earth magnets and PC boards are ready for efficient sorting and recycling.

Compact Design

With a footprint of 26.5" x 10.5" x 32" (HxWxD), the DiskMantler™ integrates seamlessly into any existing environment.
